• Storyboard is the foundation of a new and improved workspace layout. It includes information previously shown in the workspace header and summary reports. Designed to reduce the need to jump around in a patient's chart, Storyboard lets users quickly view the patient's story and take common actions from one set location. Storyboard appears on the left side of the screen and remains visible no matter where a user is in the patient's chart. Activity and navigator tabs appear across the top of the screen, where they flex and shrink to fit in the space available.

• With Storyboard, your activity tabs now appear across the top of the screen, and you can customize those tabs to best suit your needs. Tabs you don't use very often have been automatically moved to the more menu to simplify your screen.

• Open a patient's chart. Storyboard appears on the left side of the screen, and the activity tabs appear at the top of the screen.

A. Hover over any item in Storyboard to see more.

B. Click information in Storyboard to jump to an activity to see more detail or take action.

C. Click the back arrow to get back to where you were.

D. Use Chart Search to find the information you're looking for. For example, enter "CBC" to search the patient's chart for prior lab results

For further explanation and how to customize the Storyboard please view the short videos within the Playlist

- Rover users can easily jump from a patient's chart in Rover to the same spot in the patient's chart in Hyperspace with just a tap. The Jump to Hyperspace icon appears when a user opens the side menu from any activity.
- The Jump to Hyperspace icon always appears next to the Summary activity, in case a user needs to jump to a patient's chart in Hyperspace and it doesn't matter which activity she's taken to.
- 3. More Tools for Supervisors to Monitor Workqueue Status

Update Workqueue Status For workqueue 51310-NMG RFL NOVANT HEALTH F (CORNELIUS) INCOMING REFERRAL F/U	SYCHIATRIC RECOVERY & COUNSELING

Please contact Revenue Cycle Ed if you are u (1) WQ. If you need updates to be made to the Wo select the correct status reason to ensure time	Q, i.e. update supervisor, etc. please
	✓ <u>A</u> ccept X <u>C</u> ancel

- Supervisors get a reminder to use your organization's ticketing system when they set a status of Minor Issues or Critical Issues. The Update Workqueue Status window shows the following help text: "In addition to setting the workqueue status, submit a ticket for any workqueue issues you can't resolve."
- 4. Manage Orders Replaces Order Entry in Inpatient and ED Encounters
  - We're taking the next step to retire the Order Entry activity by replacing it with Manage Orders in inpatient and ED workspaces.

- The Manage Orders activity now provides a single, consistent home for inpatient ordering workflows.

- Breast imaging coordinators can now more easily prepare for an MQSA audit with the help of a sidebar in the MQSA report that lets them customize and prepare an easy-to-read printed report. They can now also see how many mammography exams technologists have performed directly within the MQSA report.
- 6. Add Missing End Events to Interventional Radiology Procedure Event Logs

- Narrator Events Management activity will be replacing the Patient Events Log button on whichever toolbar it is current.
- Sometimes, an end user doesn't document a necessary end event in a narrator for an admitted
  patient's interventional radiology procedure. This can cause problems in the patient's event log
  because a documented end event tells the system to stop adding additional information to the
  event log for the procedure. Analysts and managers can now document the end event in the
  Narrator Event Management activity.
- 7. Stereotactic Biopsy Accreditation Report Updated to Match Latest ACR Guidelines
  - "Number with pneumothorax" count now appears in the other category instead of in the core needle biopsy complications.

# 8. Changing Appointments for Standing Orders That Have Been Removed from Scheduling Makes the Orders Schedulable Again

- Canceled orders are now made schedulable again in the following scenario:
  - o A clinician places an order with multiple occurrences, otherwise known as a standing order.
  - $\circ~$  A scheduling user schedules one of the occurrences of the order.
  - A scheduling user removes the order from scheduling so that the remaining occurrences cannot be scheduled. Note that this action does not clinically cancel the order. If a clinician cancels the order, the order remains canceled in the next step.
  - A scheduling user changes the appointment for the scheduled occurrence of the order, which was removed in the previous step. The order status is changed to Needs Scheduling.
- Consider whether the remaining occurrences of the order need to be scheduled now that the initial appointment has changed. Because the orders status is now Needs Scheduling, they can use the order to schedule additional appointments as necessary

For further explanation and workflow a tip sheet will be available on Document Manager
