

Describe appropriate use of eye wash station

If you are splashed in the eyes with a **chemical**, flush the eyes for 15 minutes.

If you are splashed in the eyes with **blood or body fluid**, flush the eyes for 5 minutes.

Additional Information:

- Turn on the emergency flushing equipment by using the actuator/control valve.
- Begin flushing the exposed area in the flushing fluid stream.
- If the chemical is in your eyes, use the thumb and pointer finger of each hand to hold open both eyes so that the flushing fluid can thoroughly rinse exposed areas.

- ✓ Weekly inspection and testing is required.
- ✓ Eye wash station need to be easily accessible (not blocked; free of obstructions)
